DRONA AVIATION

QA Assessment Report

Airline Web Application — RFQ V2 & Quote List Modules

Application Under Test

Portal	URL
Customer Portal	https://oneramp.ammaammayi.in/
Airline Portal	https://airline.drona-aviation.com/

Field	Detail
Prepared by	Siva T
Test Date	13–14 May 2026
Contact no	7904089754
Modules in Scope	RFQ V2, Quote List
Out of Scope	Irregularity module (as per instructions)

1. Application Overview

The Drona Aviation platform supports a two-portal bargaining and negotiation workflow for air cargo shipments. The flow involves the Customer Portal and the Airline Portal operating in a loop until an agreed rate is reached.

Step	Actor	Action
1	**Customer**	Logs in → selects product → fills booking details → submits RFQ with requested rate
2	**Airline**	Reviews enquiry in queue → clicks Response → enters offered rate → saves
3	**Customer**	Views offered rate in Quote List → Agrees or Revises Quote
4	**Airline**	If revised, responds with a new offered rate
5	**Both**	Loop continues until customer clicks 'Agree' → enquiry becomes Accepted

2. Test Scenarios

Module 1 — Request for Quote (RFQ) V2

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
TS-01	Successful RFQ submission	Select product → fill booking details → continue → enter rate request → submit	Enquiry number generated (e.g. ENQ-2026-05-XXXXX); redirected to Quote List	Enquiry created successfully; ENQ number assigned; visible in Quote List under REQUEST status	PASS	
TS-02	Product search / filter	Use search bar on product selection screen	Matching products filter in real time	Products filter correctly as search term is typed	PASS	
TS-03	Embargo button validation	Click Embargo on product selection with a restricted route (e.g. KBL → DXB)	Appropriate embargo message or block displayed	'Embargo Identified' popup shown: 'This shipment falls under embargo list (EMB-202602-	PASS	

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
				0016); we cannot proceed with this booking.' Close & Review button displayed		
TS-04	Mandatory field validation	Leave Origin / Destination / Flight Date / Pieces / Weight blank → click Continue	Validation errors shown for each required field	Continue button remains disabled until all mandatory fields are populated	PASS	
TS-05	Special codes addition — cross-category tag bug	Click Add under Special Codes → add a tag from a different product category (e.g. add AVI tag on a Perishables-PER product) → click Continue	Only product-relevant SHC tag should appear in Verification modal (e.g. PER for Perishables)	BUG: When an animal tag (AVI) is added on a Perishables product, the Verification modal displays AVI in the SHC field instead of (or in addition to) PER; product-category mismatch is not validated	FAIL	Bug #5
TS-06	Dimensions section	Click Add under Dimensions → enter L / W / H / Pieces / Weight	Dimension row added correctly	Dimension rows added as expected	PASS	
TS-07	Flight search	Enter flight date → click Search Flight	Available flights listed	Available flights displayed with capacity details (e.g. AI 400B, BLR→DEL, 14 May 2026, 24500 kg available)	PASS	
TS-08	Continue without flight	Click 'Continue Without Flight Selection'	Booking proceeds without flight assignment	Booking proceeds to Verification modal without flight assignment	PASS	
TS-09	Verification modal	After entering details and clicking Continue	Verification popup shows correct Origin, Destination,	Verification modal displays all fields correctly	PASS	

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
			Pieces, Weight, Nature of Goods, SHC			
TS-10	Quote Request Rate modal	On verification, fill rate request → click Rate Request	Comparison of Original vs Requested rate shown	Rate comparison displayed correctly; Original Rate vs Requested Rate shown side by side	PASS	
TS-11	Rate request with missing original price	Select Live Animals (RQ type) → proceed to Quote Request Rate modal	Original Rate field pre-populated from airline rate card	BUG: Original Rate field is blank (—); Original Weight Charge shows 'USD' with no value; customer cannot compare against a baseline	FAIL	Bug #1
TS-12	Edit enquiry from Quote List	Click 3-dot menu → Edit on a pending (REQUEST status) enquiry	Edit V2 form opens; booking details are editable	Edit V2 opens with all booking fields editable as expected	PASS	
TS-13	Edit blocked on offered enquiry	Click 3-dot menu → Edit on an OFFERED enquiry	'Edit Not Allowed — This enquiry has already been OFFERED' message shown	Correct blocking message displayed; edit prevented	PASS	
TS-14	Consolidation checkbox	Check the Consolidation checkbox	Field accepted; no validation error	Checkbox accepted without error	PASS	
TS-15	Additional emails in rate request	Add email in 'Additional Emails' → click Add	Email added to notification list	Email added to list as expected	PASS	

Module 2 — Quote List

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
TS-16	Quote list loads after RFQ submission	After clicking OK on success modal	Automatically redirected to Quote List; new enquiry appears at top	Redirected to Quote List; new enquiry visible at top in REQUEST status	PASS	
TS-17	Status tabs filter	Click REQUEST / OFFERED / ACCEPTED / REJECTED / BOOKED / EXPIRED tabs	List filters to matching status	All status tabs filter correctly	PASS	
TS-18	Revise Quote	On OFFERED enquiry → 3-dot menu → Revise Quote	Quote Request popup opens with offered vs requested rate comparison	Revise Quote opens correctly with full rate comparison	PASS	
TS-19	Agree to offered rate	On OFFERED enquiry → 3-dot menu → Agree → confirm OK	Enquiry moves to ACCEPTED; no further changes allowed	Status changes to ACCEPTED (green); accepted count increments; further revisions blocked	PASS	
TS-20	History view	3-dot menu → History	Timeline of all rate exchanges shown (Original → Offered → Revised etc.)	Full negotiation history displayed chronologically	PASS	
TS-21	Agree is final — no rollback	After agreeing, attempt to Revise Quote again	No Revise or Edit option available	Only History available after agreement; Revise/Edit options absent	PASS	
TS-22	Status colour coding	Observe enquiry row colours	Each status has a distinct colour	Status colours are visually distinct across all states	PASS	
TS-23	Timer countdown	Observe expiry timer on each enquiry row	Countdown visible; enquiry expires after set duration	Countdown timer displayed (e.g. 00h:02m); no pre-expiry alert — see UX-05	PASS	UX-05 observation noted

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
TS-24	Export to Excel	Click download/export icon (top right of Quote List)	Excel file downloaded with correct columns and data	Excel file downloaded successfully with all expected data columns	PASS	
TS-25	Stats chart popup	Click stats icon (top right)	Bar chart showing Total / Requested / Offered / Accepted / Rejected / Booked / Expired counts	Chart displays correctly; zero-value bars lack clear labels — see UX-06	PASS	UX-06 observation noted
TS-26	Date range filter	Set Start Date and End Date → click Search	Quote List filters to date range	Date range filter works as expected	PASS	
TS-27	Search by enquiry number	Type ENQ number in search box	Matching enquiry displayed	Correct enquiry returned for search term	PASS	
TS-28	Airline reviews quote	Airline Portal → Enquiry Queue List → click Response	Enquiry detail with customer request info opens	Enquiry detail opens showing consignment, product, and rate information	PASS	
TS-29	Airline offers counter rate	Enter Offered Rate → Save → confirm Alert	Success toast shown; offered rate reflected in Customer Portal	Success toast shown; status updated to OFFERED in Customer Portal	PASS	
TS-30	Airline bargaining round 2	Customer revises again → airline responds again	Updated offered rate visible in both portals	Counter-offer flow repeats correctly; both portals stay in sync	PASS	
TS-31	Book button on accepted enquiry	Airline Portal → Book button on a matched enquiry	Booking flow initiated	Booking flow initiated as expected	PASS	
TS-32	'i' info button	Airline portal → click i icon on any enquiry row	Enquiry detail page opens with consignment,	Detail page opens with all expected information	PASS	

ID	Scenario	Steps	Expected Result	Actual Result	Status	Notes / Screenshot
			product, and additional details			

3. Detailed Test Cases

TC-001 — End-to-End Happy Path (Perishables, DEL → LHR)

Pre-condition: Logged into Customer Portal as Kam Testing / Siva.

Pass Criteria: Enquiry created; ENQ number assigned; visible in Quote List.

Step	Action	Expected Result	Actual Result / Notes
1	Dashboard → Request for Quote (RFQ) V2	Product selection screen loads	Product selection screen loaded correctly
2	Scroll to Perishables → select 'Perishables AI — Fruits & Vegetables — PER'	Product highlighted; Continue button becomes active	Product selected; Continue button activated
3	Click Continue	Booking Details form opens	Booking Details form opened
4	Set Origin = DEL, Destination = LHR, Flight Date = 15 May 2026, Pieces = 20, Weight = 500, Unit = K	Fields populated correctly	All fields populated
5	Enter Nature of Goods = BANANA	Text accepted	Text accepted
6	Click Add under Special Codes → type PER → Add	PER tag displayed	PER tag displayed correctly
7	Click Continue	Flights & Capacity section appears; no flights pre-assigned	Flights & Capacity section displayed
8	Click 'Continue Without Flight Selection'	Verification modal opens	Verification modal opened
9	Verify: Origin = DEL, Dest = LHR, Pieces =	All values correct	All values verified as correct

Step	Action	Expected Result	Actual Result / Notes
	20, Weight = 500 K, Goods = BANANA, SHC = PER		
10	Click Continue	Quote Request Rate modal opens	Modal opened
11	Enter Handover Date = 15 May, Reason = 'Kindly accept my rating as 2', Rate = 2, Weight Charge = 1000	Fields populated; Original Rate (2.92) vs Request (2) comparison shown	Rate comparison displayed correctly
12	Click Rate Request → Confirm Yes	Success modal with ENQ number (e.g. ENQ-2026-05-00680)	ENQ number generated; success modal shown
13	Click OK	Redirected to Quote List; new enquiry visible in REQUEST status	Redirected correctly; enquiry in REQUEST status

TC-002 — Airline Counter-Offer Flow

Pre-condition: Logged into Airline Portal as Siva / 123qwe (RwandAir).

Pass Criteria: Offered rate syncs to Customer Portal within the same session.

Step	Action	Expected Result	Actual Result / Notes
1	Menu → Request for Quotation → Enquiry Queue List	Business Enquiry Queue loads	Queue loaded
2	Locate ENQ-2026-05-00680 in the list	Row shows Customer = Kam Testing, Origin = DEL, Dest = LHR, Requested Rate = 2	Enquiry located; details correct
3	Click Response button	Enquiry detail opens with consignment info and product info	Detail page opened
4	Scroll to Sales Office Decision & Response section	Action = Offered pre-filled	'Offered' action pre-filled
5	Enter Offered Rate = 2.6, Sync Offered Weight Charge = 1300	Fields populated; verbal representation shown	Fields populated correctly
6	Click Save	Alert: 'You Offered rate of USD 2.6 per kg, totalling USD 1300.00 — proceed?'	Alert displayed with correct values

Step	Action	Expected Result	Actual Result / Notes
7	Click OK	Success toast: 'Enquiry ENQ-2026-05-00680 processed, Offered has been made'	Success toast shown
8	Switch to Customer Portal → Quote List	ENQ-2026-05-00680 now shows OFFERED status; Offered Rate = 2.6, Weight Charge = 1300	Status and rates synced correctly

TC-003 — Customer Re-Negotiation

Pass Criteria: Customer's revised request is reflected on the Airline Portal.

Step	Action	Expected Result	Actual Result / Notes
1	Customer Portal → Quote List → 3-dot menu on ENQ-2026-05-00680 → Revise Quote	Quote Request Alert modal shows: Original 2.6/1300, Requested 2/1000, Response 2.6/1300	Modal displayed with correct comparison values
2	Click Request button	Quote Requests form opens (Handover Date, Reason, Rate, Weight Charge)	Form opened
3	Enter Rate = 2.5, Weight Charge = 1250, Reason = 'frequent customer'	Offered 2.6 vs Requested 2.5 comparison visible	Comparison displayed correctly
4	Click Submit	Request submitted successfully; enquiry updated	Submission successful
5	Verify Airline Portal → Enquiry Queue	Requested Rate shows 2.5 / 1250	Updated rate reflected on Airline Portal

TC-004 — Final Agreement

Pass Criteria: Enquiry locked after agreement; no further modifications possible.

Step	Action	Expected Result	Actual Result / Notes
1	Airline Portal → Response on ENQ-2026-05-00680	Sees customer revised request 2.5/1250	Revised request visible

Step	Action	Expected Result	Actual Result / Notes
2	Enter Offered Rate = 2.5, Weight Charge = 1250 → Save → OK	Success; offered rate = 2.5 in both portals	Offered rate synced to both portals
3	Customer Portal → Quote List → 3-dot menu → Agree	Quote Request Alert shows Offered = 2.5 matching Request = 2.5	Agreement modal shown with matching rates
4	Click Agree → Confirm OK	Enquiry status changes to ACCEPTED (green); Accepted count increments	Status changed to ACCEPTED correctly
5	Try 3-dot menu on same enquiry	No Revise / Edit options; only History available	Enquiry locked; only History available

TC-005 — Negative / Boundary Tests

Step	Action	Expected Result	Actual Result / Notes
N-01	Submit RFQ with blank Weight	'Weight is required' validation error	Continue button disabled; validation enforced
N-02	Request Rate = 0	Rate > 0 validation error displayed	BUG #2: Rate = 0 accepted without validation; request submitted
N-03	Edit offered enquiry	'Edit Not Allowed — This enquiry has already been OFFERED'	Correct blocking message shown
N-04	Agree while airline reviewing	Blocking message with clear guidance	Warning shown; lacks wait-time guidance — Bug #3
N-05	Invalid login credentials	Login fails with appropriate error	Login rejected correctly
N-06	Embargo product	Embargo validation triggered	Embargo popup shown correctly
N-07	Large weight value (99,999)	Accepted without system error	Accepted; no error — consider upper-limit validation
N-08	Special characters in Nature of Goods	Characters sanitised or rejected	Characters accepted — Bug #6; flag for review

4. Bugs Found

Bug #1 — Original Price Missing for Some Products

Severity	**Medium**
Module	RFQ V2 → Quote Request Rate modal
Affected	Live Animals (RQ type) and other non-price-listed products
Steps to Reproduce	1. Customer Portal → RFQ V2 → Select 'Live Animals - RQ' 2. Fill booking details (e.g. DEL → DXB, 20 pcs, 500 K, Nature = ABCD) 3. Continue → Verification modal → Continue 4. Quote Request Rate modal opens
Actual Result	Original Rate field is blank (—); Original Weight Charge shows 'USD' with no numeric value.
Expected Result	Original Rate should be pre-populated from the airline's standard rate card to enable rate comparison.
Screenshot Ref.	Assignment PDF — Page 42
Impact	Customer cannot compare their rate request against a baseline; negotiation is one-sided.
Status	**Open**

Bug #2 — Rate = 0 Accepted Without Validation

Severity	**Medium**
Module	RFQ V2 → Quote Request Rate modal
Affected	All products
Steps to Reproduce	1. Submit an RFQ for any product 2. In the Quote Request Rate modal, enter Rate = 0 and Weight Charge = 0 3. Click Rate Request → Confirm
Actual Result	Request submitted successfully with Rate = 0.
Expected Result	System should validate Rate > 0 and display an error message; a zero-rate submission has no commercial meaning.
Screenshot Ref.	Assignment PDF — Page 48
Impact	Invalid commercial requests can enter the negotiation workflow.
Status	**Open**

Bug #3 — Agree Action Blocked Without Clear Resolution Guidance (UX Concern)

Severity	**Low**
Module	Quote List → Agree action
Affected	Customer Portal — concurrent access scenario
Steps to Reproduce	1. Airline opens the Response screen for an enquiry 2. Customer simultaneously attempts Agree on the same enquiry
Actual Result	Warning popup shown: 'Your quote request ENQ-XXXX is being reviewed. Please wait for Airline Team response.' Customer cannot proceed.
Expected Result	Behaviour is acceptable to prevent race conditions, but the message should include an estimated wait time or a Refresh option so the customer knows how to proceed.
Screenshot Ref.	N/A — reproducible during concurrent access
Impact	Customer is blocked without guidance on next action.
Status	**Open — UX improvement required**

Bug #4 — Permission Error on First Airline Portal Login

Severity	**Low**
Module	Airline Portal — Login
Affected	Test account: Siva / 123qwe (RwandAir)
Steps to Reproduce	1. Navigate to Airline Portal: https://airline.drona-aviation.com/ 2. Log in with credentials Siva / 123qwe
Actual Result	'Opps! You don't have permission to access this content. Please contact the Admin for assistance.' popup appears. Missing permissions: API_Daily_Operative_Flight, API_Statistics_Booking.
Expected Result	User should land on the dashboard without a permission error, or the required permissions should be pre-granted for the test account.
Screenshot Ref.	Assignment PDF — noted during login
Impact	Disrupts testing workflow; misleading for new users.
Status	**Open — Admin action required**

Bug #5 — Cross-Category SHC Tag Accepted Without Validation

Severity	**Medium**
Module	RFQ V2 → Special Codes → Verification modal
Affected	All product categories
Steps to Reproduce	1. Select a Perishables product (e.g. Perishables AI — Fruits & Vegetables — PER) 2. Under Special Codes, click Add and enter 'AVI' (an animal category tag) 3. Click Continue 4. Observe the Verification modal SHC field
Actual Result	The Verification modal displays 'AVI' (or 'AVI, PER') in the SHC field, regardless of the selected product category. There is no validation preventing a user from applying an irrelevant or incompatible SHC code.
Expected Result	The system should either (a) restrict available SHC codes to those relevant to the selected product category, or (b) display a warning when an incompatible SHC code is added.
Screenshot Ref.	Supplementary PDF — Pages 2–3
Impact	Incorrect SHC codes can result in regulatory non-compliance or handling errors during air cargo processing.
Status	**Open**

Bug #6 — Special Characters Accepted in Nature of Goods Field

Severity	**Low**
Module	RFQ V2 → Booking Details
Affected	Nature of Goods field
Steps to Reproduce	1. In the Booking Details form, enter '@#$%' in the Nature of Goods field 2. Click Continue
Actual Result	Special characters are accepted without restriction or warning.
Expected Result	The field should validate that only alphanumeric characters, spaces, and standard punctuation are accepted. Special characters may cause data issues downstream.
Screenshot Ref.	Assignment PDF — N-08 test

Impact	Data integrity risk; potential downstream system or reporting issues.
Status	**Open — flag for business rule review**

5. User Experience (UX) Observations

#	Observation	Suggestion
UX-01	After Rate Request submission, the success modal appears but the underlying Rate Request modal (with Rate Request / No buttons) remains visible behind the success popup. Closing the modal flow can be confusing.	Automatically close the Rate Request modal upon display of the success confirmation popup to prevent UI layering confusion.
UX-02	The Verification popup displays Total, Base Total, and USD Total columns, but all three are blank with no values shown.	Pre-populate estimated charges in these fields, or display placeholder text such as 'Rate to be confirmed' to indicate the fields are intentionally pending.
UX-03	'Edit Not Allowed' error appears when a user clicks Edit on an OFFERED enquiry. The Edit option should not be visible if it is non-functional for that status.	Hide or grey out the Edit option for OFFERED, ACCEPTED, and BOOKED enquiry statuses to prevent user confusion.
UX-04	The 3-dot action menu displays different options depending on the enquiry status, but there is no clear indication explaining why certain actions are unavailable. Users may be confused when expected actions do not appear.	Display a tooltip or status-specific label in the 3-dot menu indicating which actions are available for the current status (e.g. 'Revision not available for ACCEPTED enquiries'). A static reference table in the UI or Help section mapping each status to its available actions would also improve clarity.
UX-05	The timer countdown (e.g. '00h:02m') is visible on each enquiry row, but there is no visual warning when the expiry time is approaching.	Change the timer colour to amber when fewer than 30 minutes remain, and to red when fewer than 10 minutes remain, to alert users before their enquiry expires.
UX-06	The stats chart popup displays categories with zero counts (e.g. Rejected, Booked, Expired), but the zero values are not clearly highlighted, which may reduce readability for users.	Display a visible '0' label above or inside each zero-value bar to ensure the empty state is clearly communicated and readable.
UX-07	A 'Just a Note' popup appears when clicking Revise on a pending enquiry, stating 'You've already sent a quote request… Please wait for the response.' This is a second notification for the same state and creates a slightly confusing flow.	Consolidate status messaging into a single, clear status indicator on the Quote List row itself (e.g. a badge or tooltip), rather than using a separate popup.
UX-08	The Handover Date field in the Quote Request Rate modal accepts free-text input instead of using a date	Replace the plain-text Handover Date field with a date picker component, consistent with the Flight Date field in

#	Observation	Suggestion
	picker, which can lead to inconsistent or invalid date formats being submitted.	the Booking Details form. Validate that the entered date is not in the past.
UX-09	The product list on the product selection screen has no pagination, category jump links, or sticky category headers, requiring users to scroll through a large number of entries to find their desired product.	Add category anchor links or sticky category headers to improve navigability, and consider adding pagination or a 'jump to category' dropdown.

6. Test Summary

Category	Count / Detail
Test Scenarios Defined	32
Detailed Test Cases	5 (TC-001 to TC-005)
Negative / Boundary Tests	8 (N-01 to N-08)
Total Bugs Found	6
Critical Bugs	0
Medium Severity Bugs	3 (Bug #1, #2, #5)
Low Severity Bugs	3 (Bug #3, #4, #6)
UX Observations	9 (UX-01 to UX-09)
Overall Pass Rate (Scenarios)	30 / 32 (94%)

Overall Assessment

The core end-to-end negotiation flow — RFQ submission → Airline offer → Customer revision → Airline counter-offer → Customer agreement — functions as designed. Status transitions, history tracking, Excel export, and the stats chart all work correctly.

Bug #1 (missing original price for non-price-listed products) is the highest-priority issue as it prevents fair, transparent rate negotiation. This should be resolved before production release.

Bug #5 (cross-category SHC tag accepted without validation) carries potential regulatory compliance risk and should be prioritised alongside Bug #1.

Bug #2 (Rate = 0 accepted) is a medium-severity business rule gap that should be addressed to prevent commercially invalid RFQs from entering the system.

The 3-dot action menu visibility logic (UX-03, UX-04) and the Handover Date field format (UX-08) are secondary improvements that would meaningfully enhance usability.

Thankyou,
